Cloud Audit

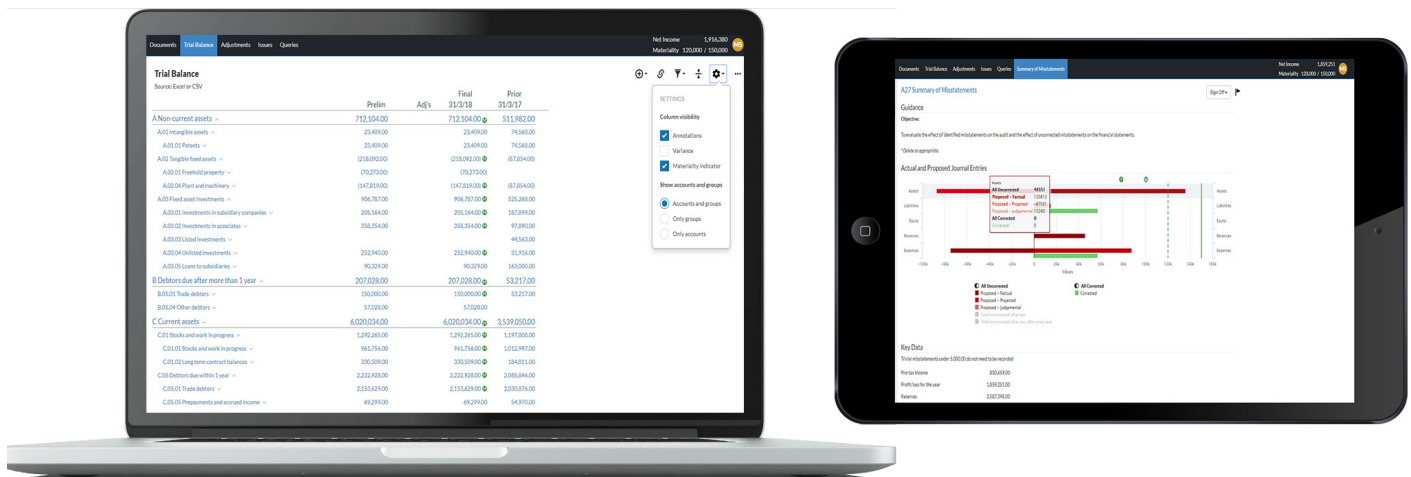

The intelligent choice for risk focused audits

Using the power of CaseWare Cloud, CaseWare's new Company Audit software empowers audit teams to collaborate more effectively by accessing the latest client data anywhere, on any device, increasing efficiency by up to 50%.

Paperless tools you need for advanced audit automation for shorter, faster, risk focused audit

CaseWare's intelligent file building tool removes irrelevant documents and procedures giving you the confidence that your audit has been specifically tailored to your client.

Review engagements quickly and identify issues accurately through the colour coded visualisation tool, allowing you to provide greater value-added insights to your clients. Designed to speed up your audit process with intelligent one-click responses and roll-forward ability, a fast update process ensures the minimum amount of work to achieve the maximum result.

Key benefits

Client Collaboration

Auditors can securely send and receive documents and track information requests

Intelligent File Building

Engagement files content has intelligence built in with users only seeing relevant documents and procedures

Visualisation

Identify issues quickly and provide value insights to your clients

Roll Forward

Documents, responses, questions, modifications and procedures can be carried forward

Update Process

Software is updated automatically, reducing IT administration requirements

Performance

Developed to the highest possible standard, for very quick performance

Why the Cloud?

Cloud technology is changing accounting software and how accountants are working. Cloud platforms make data and software accessible from anywhere, anytime, from any device without a need for a central hub.

Promoting greater collaboration is clearly key for accounting firms looking to impress prospects or retain clients, and the cloud has great advantages when it comes to promoting real-time collaboration by allowing firms to review, comment on and sign off files at the same time.

CaseWare's Cloud platform allows sensitive data to be transferred securely online through cloud-based add-on tools - essential in this post GDPR world.
